IT Infrastructure Maintenance

IT infrastructure maintenance involves trouble shooting ,analyzing and repairing of networks and it's components. Through our network analyses, we are able to determine if the existing network and it's design satisfies holly all relevant users and whether it needs any upgrade or expansion to satisfy the growing number of users. We also ensure integrity, security, efficiency ,reliability and availability of the network and all it's components.

Computer Maintenance & Repair.

Our computer repair and maintenance ensures proper working of your computer hardware and software at all times . Every month of each term, we do a routine hardware and software check up on all your computers and relevant peripheral devices . This assist us in establishing what hardware parts need to be repaired as we carry out all necessary software updates . Our objective is to ensure our clients realize optimum efficiency, availability and security of there computers and softwares at all times.

Consultancy

Our consultancy works hand in hand with a preliminary IT audits that we do before we bring any client on board. Using technological position audit, our consultancy is based on the review of the technologies that your institution is currently using and that it needs to add. We characterize technology as either being base, key, pacing or emerging. Using systems and applications audit, our consultancy strives to ensure you understand before any computer or software purchase the need of ensuring any system or application is appropriate, efficient and is adequately controlled to ensure it's valid, reliable, timely, and has secure input, processing, and output at all levels.

Through consultancy, we are able to deliver innovative solutions to our clients unique problems that they encounter in their day to day operations.
